SAFETY DATA SHEET
NEXBASE™ 3020

SECTION 1: Identification of the substance/mixture and of the company/undertaking

1.1. Product identifier

<table>
<thead>
<tr>
<th>Product name</th>
<th>NEXBASE™ 3020</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chemical name</td>
<td>Lubricating oils (petroleum), C15-C30, hydrotreated neutral oilbased</td>
</tr>
<tr>
<td>Product number</td>
<td>ID 12563</td>
</tr>
<tr>
<td>Internal identification</td>
<td>192503, 822700</td>
</tr>
<tr>
<td>REACH registration number</td>
<td>01-2119474878-16-0000</td>
</tr>
</tbody>
</table>

1.2. Relevant identified uses of the substance or mixture and uses advised against

Identified uses
- Manufacture of substance, (ES01)
- Distribution of substance, (ES01a)
- Formulation & (re)packing of substances and mixtures, (ES02)
- Uses in coatings (ES03a-c)
- Use in cleaning agents (ES04a-c)
- Use in oil and gas field drilling and production operations (ES05a-b)
- Metal working fluids/rolling oils (ES07a-b)
- Use as binders and release agents (ES10a-b)
- Use in agrochemicals (ES11a-b)
- Road and construction applications (ES15)
- Rubber production and processing (ES19)
- Polymer processing (ES21a-b)
- Use as a fuel (ES12b-c)
- Lubricants (ES6a-e)
- Laboratory chemical (ES17a-b)
- Mining chemicals (ES23)
- Water treatment chemicals (ES22a-b)
- Explosives manufacture & use (ES18b)
- Functional fluids (ES13a-c)

1.3. Details of the supplier of the safety data sheet

Supplier
Neste (Suisse) S.A.
16 Chemin des Coquelicots, 1214 Vernier, SWITZERLAND
Tel. +41 22 561 8000
SDS@neste.com (chemical safety)

1.4. Emergency telephone number

National emergency telephone +358-9-471 977, +358-9-4711, Poison Information Centre number

SECTION 2: Hazards identification

2.1. Classification of the substance or mixture

Classification (EC 1272/2008)

<table>
<thead>
<tr>
<th>Physical hazards</th>
<th>Not Classified</th>
</tr>
</thead>
<tbody>
<tr>
<td>Health hazards</td>
<td>Asp. Tox. 1 - H304</td>
</tr>
<tr>
<td>Environmental hazards</td>
<td>Not Classified</td>
</tr>
</tbody>
</table>

Supersedes date: 30/05/2016
NEXBASE™ 3020

Signal word
Danger

Hazard statements
H304 May be fatal if swallowed and enters airways.

Precautionary statements
P301+P310 IF SWALLOWED: Immediately call a POISON CENTER/ doctor.
P331 Do NOT induce vomiting.
P501 Dispose of contents/ container in accordance with local regulations.

Supplemental label information
RCH006a Keep lamps filled with this liquid out of the reach of children.
RCH006b Just a sip of lamp oil — or even sucking the wick of lamps — may lead to life-threatening lung damage.

Contains
Lubricating oils (petroleum), C15-30, hydrotreated neutral oil-based

2.3. Other hazards
Other hazards
Oil mist: May cause eye and respiratory system irritation. Repeated exposure may cause skin dryness or cracking. Risk of soil and ground water contamination.

SECTION 3: Composition/information on ingredients

3.2. Mixtures

<table>
<thead>
<tr>
<th>Lubricating oils (petroleum), C15-30, hydrotreated neutral oil-based</th>
<th>100 %</th>
</tr>
</thead>
<tbody>
<tr>
<td>CAS number: 72623-86-0</td>
<td>EC number: 276-737-9</td>

<td>REACH registration number: 01-2119474878-16-XXXX</td>
</tr>
</tbody>
</table>

Classification
Asp. Tox. 1 - H304

The Full Text for all R-Phrases and Hazard Statements are Displayed in Section 16.

Other information
A petroleum product., DMSO < 3% (IP 346).

SECTION 4: First aid measures

4.1. Description of first aid measures

Inhalation
Unlikely to be hazardous by inhalation because of the low vapour pressure of the product at ambient temperature. If spray/mist has been inhaled, proceed as follows. Remove person to fresh air and keep comfortable for breathing. Get medical attention if symptoms are severe or persist.

Ingestion
Do not induce vomiting. Get medical attention.

Skin contact
Remove contaminated clothing immediately and wash skin with soap and water. Get medical attention if irritation persists after washing. Contact with hot product can cause serious thermal burns.

Eye contact
Rinse immediately with plenty of water. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if irritation persists after washing.

4.2. Most important symptoms and effects, both acute and delayed

General information
Oil mist: May cause eye and respiratory system irritation. Entry into the lungs following ingestion or vomiting may cause chemical pneumonitis.

4.3. Indication of any immediate medical attention and special treatment needed

Notes for the doctor
Treat symptomatically.

SECTION 5: Firefighting measures
NEXBASE™ 3020

5.1. Extinguishing media

Suitable extinguishing media: Water spray, foam, dry powder or carbon dioxide.

Unsuitable extinguishing media: Do not use water jet as an extinguisher, as this will spread the fire.

5.2. Special hazards arising from the substance or mixture

Specific hazards: Not known.

Hazardous combustion products: Carbon dioxide (CO2). Carbon monoxide (CO).

5.3. Advice for firefighters

Special protective equipment for firefighters: Wear positive-pressure self-contained breathing apparatus (SCBA) and appropriate protective clothing.

SECTION 6: Accidental release measures

6.1. Personal precautions, protective equipment and emergency procedures

Personal precautions: Avoid breathing mist. Wear adequate protective equipment at all operations.

For emergency responders: Prevent unauthorized access. Eliminate all ignition sources if safe to do so. Take precautionary measures against static discharge.

6.2. Environmental precautions

Environmental precautions: Avoid release to the environment. Stop leak if safe to do so. Avoid the spillage or runoff entering drains, sewers or watercourses. Contain spillage with sand, earth or other suitable non-combustible material. Inform the relevant authorities if environmental pollution occurs (sewers, waterways, soil or air). Risk of soil and ground water contamination.

6.3. Methods and material for containment and cleaning up

Methods for cleaning up: Immediately start clean-up of the liquid and contaminated soil. Large spills should be collected mechanically (remove by pumping) for disposal. Small Spillages: Absorb spillage with sand or other inert absorbent.

6.4. Reference to other sections

Reference to other sections: For personal protection, see Section 8.

SECTION 7: Handling and storage

7.1. Precautions for safe handling

Usage precautions: Avoid heat, flames and other sources of ignition. Take precautionary measures against static discharges. Use only in well-ventilated areas. Avoid inhalation of vapours and contact with skin and eyes. Use personal protective equipment and/or local ventilation when needed. Do not eat, drink or smoke when using this product. Wash hands and any other contaminated areas of the body with soap and water before leaving the work site.

7.2. Conditions for safe storage, including any incompatibilities

Storage precautions: Store in accordance with local regulations. Store in a demarcated bunded area to prevent release to drains and/or watercourses. Take precautions against leakage by constructing collecting pools and sewerage systems as well as by surfacing the loading and unloading stations. Store in tightly-closed, original container in a dry, cool and well-ventilated place. Protect from light. Suitable container materials: Stainless steel.

7.3. Specific end use(s)

Specific end use(s): Not known.
SECTION 8: Exposure Controls/personal protection

8.1. Control parameters

Occupational exposure limits
Oil mist: 5 mg/m³ (8h) HTP 2016/FIN.
5 mg/m³, TWA PEL (OSHA) 5 mg/m³, TLV-TWA (ACGIH) 10 mg/m³, TLV-STEL (ACGIH).

PNEC Not available.

Lubricating oils (petroleum), C15-30, hydrotreated neutral oil-based (CAS: 72623-86-0)

DNEL
Workers - Inhalation; Long term local effects: 5,4 mg/m³, (8h), Aerosol
Consumer - Inhalation; Long term local effects: 1,2 mg/m³, (24h), Aerosol
Available hazard data do not enable the derivation of a DNEL for dermal irritant effects.
Available hazard data do not support the need for a DNEL to be established for other health effects.

8.2. Exposure controls

Appropriate engineering controls
Use only in well-ventilated areas. Use personal protective equipment and/or local ventilation when needed.

Eye/face protection
Tight-fitting safety glasses.

Hand protection
Wear protective gloves. It is recommended that gloves are made of the following material: Polyvinyl chloride (PVC). Nitrile rubber. Change protective gloves regularly. Protective gloves according to standards EN 420 and EN 374.

Other skin and body protection
Protective clothing when needed. Wear anti-static protective clothing if there is a risk of ignition from static electricity.

Respiratory protection
Oil mist: Combination filter, type A2/P2. Filter device could be used maximum 2 hours at a time. Filter devices must not be used in conditions where the oxygen level is low (< 19 vol.-%). At high concentrations a breathing apparatus must be used (self-contained or fresh air hose breathing apparatus). Filter must be changed often enough. Respirators according to standards EN 140 and EN 141.

SECTION 9: Physical and Chemical Properties

9.1. Information on basic physical and chemical properties

Appearance Liquid.
Colour Colourless. Clear.
Odour Odourless.
Odour threshold -
pH -
Melting point Pour point ≤ -42°C (ASTM D-97)
Initial boiling point and range 270-380°C
Flash point > 150°C (ASTM D-93).
Upper/lower flammability or explosive limits -
Vapour pressure < 0,1 hPa @ 20°C
NEXBASE™ 3020

Vapour density -
Relative density 0.82 @ 15°C (ASTM D-4052).
Solubility(ies) Insoluble in water.
Partition coefficient log Kow: > 6
Auto-ignition temperature -
Decomposition Temperature -
Viscosity Kinematic viscosity typical value 7.5 mm²/s @ 40°C (ASTM D-445).
Explosive properties Not considered to be explosive.
Oxidising properties Does not meet the criteria for classification as oxidising.

9.2. Other information
Other information Melting/pour point: ≤ -42°C Dynamic viscosity ~ 12 mPa s @ +20°C Dynamic viscosity ~ 50 mPa s @ -8°C

SECTION 10: Stability and reactivity

10.1. Reactivity
Reactivity There are no known reactivity hazards associated with this product.

10.2. Chemical stability
Stability Stable at normal ambient temperatures and when used as recommended.

10.3. Possibility of hazardous reactions
Possibility of hazardous reactions No potentially hazardous reactions known.

10.4. Conditions to avoid
Conditions to avoid Keep away from heat, sparks and open flame.

10.5. Incompatible materials
Materials to avoid Strong acids. Oxidising agents.

10.6. Hazardous decomposition products
Hazardous decomposition products Does not decompose when used and stored as recommended.

SECTION 11: Toxicological information

11.1. Information on toxicological effects
Toxicological effects Based on available data the classification criteria are not met.
Skin corrosion/irritation Based on available data the classification criteria are not met. (OECD 404), Repeated exposure may cause skin dryness or cracking.

Serious eye damage/irritation Based on available data the classification criteria are not met. (OECD 405) Oil mist: May cause eye and respiratory system irritation.
Skin sensitisation Based on available data the classification criteria are not met. (OECD 406)
NEXBASE™ 3020

Germ cell mutagenicity
Genotoxicity - in vitro Based on available data the classification criteria are not met. (OECD 471, 473, 476)
Genotoxicity - in vivo Based on available data the classification criteria are not met. (OECD 474)

Carcinogenicity
Carcinogenicity Based on available data the classification criteria are not met. (OECD 451, 453)
IARC carcinogenicity Not listed.
NTP carcinogenicity Not listed.

Reproductive toxicity
Reproductive toxicity - fertility Based on available data the classification criteria are not met. (OECD 421)
Reproductive toxicity - development Based on available data the classification criteria are not met. (OECD 414)

Specific target organ toxicity - single exposure
STOT - single exposure Not classified as a specific target organ toxicant after a single exposure.

Specific target organ toxicity - repeated exposure
STOT - repeated exposure Based on available data the classification criteria are not met. (OECD 408, 410, 411, 412, 453)

Aspiration hazard
Aspiration hazard Aspiration hazard if swallowed. Entry into the lungs following ingestion or vomiting may cause chemical pneumonitis.

Acute toxicity - oral
Notes (oral LD₅₀) LD₅₀ > 5000 mg/kg, Oral, Rat (OECD 401)

Acute toxicity - dermal
Notes (dermal LD₅₀) LD₅₀ > 2000 mg/kg, Dermal, Rabbit (OECD 402)

Acute toxicity - inhalation
Notes (inhalation LC₅₀) LC₅₀ > 5.53 mg/l, Inhalation, Rat (4h) (OECD 403)

SECTION 12: Ecological Information

12.1. Toxicity
Toxicity Based on available data the classification criteria are not met.

Acute toxicity - fish LL₅₀, 96 hours: > 100 mg/l,
NOEL, 96 hours: ≥ 100 mg/l,
WAF (OECD 203)

Acute toxicity - aquatic invertebrates EL₅₀, 24 - 48 hours: > 10000 mg/l,
NOEL, 48 - 96 hours: ≥ 10000 mg/l,
LL₅₀, 24 - 96 hours: > 10000 mg/l,
WAF (OECD 202)

Acute toxicity - aquatic plants NOEL, 72 hours: ≥ 100 mg/l,
WAF (OECD 201)
NEXBASE™ 3020

Acute toxicity - microorganisms
NOEL, 10 minutes: > 1,93 mg/l, Micro-organisms (wastewater sludge)
(DIN 38412, DIN38409)

Chronic toxicity - aquatic invertebrates
NOEL, 21 days: 10 mg/l, Daphnia magna
WAF (OECD 211)

12.2. Persistence and degradability
Persistence and degradability The product is slowly degradable.
Stability (hydrolysis) No significant reaction in water.
Biodegradation Non-rapidly degradable (OECD 301B)

12.3. Bioaccumulative potential
Bioaccumulative potential Possibly bioaccumulative.
Partition coefficient log Kow: > 6

12.4. Mobility in soil
Mobility The product is insoluble in water. Mainly non-volatile. Product can penetrate soil until reaching the surface of ground water. The product contains substances which are bound to particulate matter and are retained in soil.

12.5. Results of PBT and vPvB assessment
Results of PBT and vPvB assessment This product does not contain any substances classified as PBT or vPvB. (Anthracene < 0,1 %)

12.6. Other adverse effects

SECTION 13: Disposal considerations

13.1. Waste treatment methods
Disposal methods Dispose of waste to licensed waste disposal site in accordance with the requirements of the local Waste Disposal Authority. Dispose of this material and its container to hazardous or special waste collection point. When handling waste, the safety precautions applying to handling of the product should be considered. Care should be taken when handling emptied containers that have not been thoroughly cleaned or rinsed out. Waste packaging should be collected for reuse or recycling.

SECTION 14: Transport information

General The product is not covered by international regulations on the transport of dangerous goods (IMDG, IATA, ADR/RID). No DOT label requirement noted

14.1. UN number
UN No. (ADR/RID) -

14.2. UN proper shipping name
Proper shipping name -
(ADR/RID)

14.3. Transport hazard class(es)
ADR/RID class -

14.4. Packing group
ADR/RID packing group -
NEXBASE™ 3020

14.5. Environmental hazards
Environmentally hazardous substance/marine pollutant
No.

14.6. Special precautions for user

14.7. Transport in bulk according to Annex II of MARPOL and the IBC Code
Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code
Noxious liquid, NF (5) n.o.s. (NEXBASE 3020, contains iso- and cyclo-alkanes C12+). Ship type: 2 Cat Y According to MARPOL: "Non-solidifying substance"

SECTION 15: Regulatory information

15.1. Safety, health and environmental regulations/legislation specific for the substance or mixture
National regulations
US Federal: Not listed under CERCLA or Section 302 or Section 313 of EPCRA.

EU legislation

Restrictions (Title VIII Regulation 1907/2006) Entry number: 3

15.2. Chemical safety assessment
A chemical safety assessment has been carried out.

Inventories
EU - EINECS/ELINCS
Yes

Canada - DSL/NDSL
Yes
DSL

US - TSCA
Yes
To the best of our knowledge, the product components are not listed on any US national/regional regulatory lists except the TSCA inventory.

Australia - AICS
Yes

Japan - MITI
Yes

Korea - KECI

</tbody>
</table>
Use as a Fuel - Professional

**Emission factor - soil**
Release fraction to soil from wide dispersive use (regional only): 0.00001

**Environmental factors not influenced by risk management measures**

**Dilution**
- Local freshwater dilution factor: 10
- Local marine water dilution factor: 100

**Risk management measures**

**Good practice**
Common practices vary across sites, thus conservative process release estimates used. Risk from environmental exposure is driven by fresh water.

**STP details**
Estimated substance removal from wastewater via domestic sewage treatment: 94.5%
Removal efficiency (total): 94.5%
Maximum allowable site tonnage (Msafe), based on release following total wastewater treatment removal: 14 kg/day
Assumed domestic sewage treatment plant flow (m³/day): 2000.

**Technical onsite conditions and measures to reduce or limit discharges to air, water and soil**

**Air**
Not determined.

**Water**
No wastewater treatment required.

**Soil**
Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

**Conditions and measures related to external treatment of waste for disposal**

**Waste treatment**
Combustion emissions limited by required exhaust emission controls. Combustion emissions considered in regional exposure assessment. External treatment and disposal of waste should comply with applicable local and/or national regulations.

**Conditions and measures related to external recovery of waste**

**Recovery method**
This substance is consumed during use and no waste of the substance is generated.

### 2. Conditions of use affecting exposure (Workers - Health 1)

**Risk management measures**

- Avoid splashing.
- Avoid contact with contaminated tools and objects.
- Handle in accordance with good industrial hygiene and safety practice.
- Assumes a good basic standard of occupational hygiene is implemented.
- Supervision in place to check that the RMMs in place are being used correctly and OCs followed.

**Additional advice**
Do not ingest. If swallowed, then seek immediate medical assistance.

### 3. Exposure estimation (Environment 1)

**Assessment method**
Used Petrorisk model. (Hydrocarbon Block Method)

Risk-driving RCR - air compartment driven RCR(air) ≤ 0.00018
Risk-driving RCR - water compartment driven RCR(water) ≤ 0.00087

### 4. Guidance to check compliance with the exposure scenario (Environment 1)
Use as a Fuel - Professional

Guidance is based on assumed operating conditions which may not be applicable to all sites, thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).

3. Exposure estimation (Health 1)

Qualitative approach used to conclude safe use.

**Risk management measures**

**Good practice**
Common practices vary across sites, thus conservative process release estimates used. Risk from environmental exposure is driven by freshwater sediment.

**STP details**
Estimated substance removal from wastewater via domestic sewage treatment: 94.5%
Removal efficiency (total): 94.5%
Maximum allowable site tonnage (Msafe), based on release following total wastewater treatment removal: 2 700 tonne/day
Assumed domestic sewage treatment plant flow (m³/day): 10 000.

**Technical onsite conditions and measures to reduce or limit discharges to air, water and soil**

**Air**
Treat air emission to provide a typical removal efficiency of 90%.

**Water**
No wastewater treatment required. Prevent discharge of undissolved substance to or recover from onsite waste water.

**Soil**
Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

**Conditions and measures related to external treatment of waste for disposal**

**Waste treatment**
During manufacturing no waste of the substance is generated.

**Conditions and measures related to external recovery of waste**

**Recovery method**
During manufacturing no waste of the substance is generated.

### 2. Conditions of use affecting exposure (Workers - Health 1)

**Risk management measures**

Avoid splashing.
Avoid contact with contaminated tools and objects.
Handle in accordance with good industrial hygiene and safety practice.
Assumes a good basic standard of occupational hygiene is implemented.
Supervision in place to check that the RMMs in place are being used correctly and OCs followed.

**Additional advice**
Do not ingest. If swallowed, then seek immediate medical assistance.

### 3. Exposure estimation (Environment 1)

**Assessment method**
Used Petrorisk model. (Hydrocarbon Block Method)
Risk-driving RCR - air compartment driven RCR(air) ≤ 0.0029
Risk-driving RCR - water compartment driven RCR(water) ≤ 0.013

### 4. Guidance to check compliance with the exposure scenario (Environment 1)
Manufacture of Substance

 Guidance is based on assumed operating conditions which may not be applicable to all sites, thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).

3. Exposure estimation (Health 1)

 Qualitative approach used to conclude safe use.
Exposure scenario
Distribution of Substance

Identification

Product name: Lubricating oils (petroleum), C15-30, hydrotreated neutral oil-based
CAS number: 72623-86-0
Version number: 2017
Es reference: ES01a

1. Title of exposure scenario

Main title: Distribution of Substance
Process scope: Loading (including marine vessel/barge, rail/road car and IBC loading) and repacking (including drums and small packs) of substance, including its sampling, storage, unloading distribution and associated laboratory activities.

Environment

Environmental release category: ERC4 Industrial use of processing aids in processes and products, not becoming part of articles.
ERC5 Industrial use resulting in inclusion into or onto a matrix.
ERC6a Industrial use resulting in manufacture of another substance (use of intermediates).
ERC6b Industrial use of reactive processing aids.
ERC6c Industrial use of monomers for manufacture of thermoplastics.
ERC6d Industrial use of process regulators for polymerisation processes in production of resins, rubbers, polymers.
ERC7 Industrial use of substances in closed systems.

SPERC: ESVOC SpERC 1.1b.v1

Worker

Process category: PROC1 Use in closed process, no likelihood of exposure.
PROC2 Use in closed, continuous process with occasional controlled exposure
PROC3 Use in closed batch process (synthesis or formulation).
PROC4 Use in batch and other process (synthesis) where opportunity for exposure arises.
PROC8a Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at non-dedicated facilities.
PROC8b Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at dedicated facilities.
PROC9 Transfer of substance or preparation into small containers (dedicated filling line, including weighing).
PROC15 Use as laboratory reagent.

2. Conditions of use affecting exposure (industrial - Environment 1)

Product characteristics: Substance is complex UVCB. Predominantly hydrophobic.

Amounts used: 18/108
Distribution of Substance

Fraction of EU tonnage used in region: 0.1
Regional use tonnage: 3 600 tonnes/year
Fraction of Regional tonnage used locally: 0.002
Annual site tonnage: 7.3 tonnes
Maximum daily site tonnage: 0.36 tonnes

Frequency and duration of use
Continuous release.
Emission days: 20 days/year

Other given operational conditions affecting environmental exposure

Risk management measures

Good practice
Common practices vary across sites, thus conservative process release estimates used.
Risk from environmental exposure is driven by terrestrial secondary poisoning.

STP details
Estimated substance removal from wastewater via domestic sewage treatment: 94.5%
Removal efficiency (total): 94.5%
Maximum allowable site tonnage (Msafe), based on release following total wastewater treatment removal: 120 tonne/day
Assumed domestic sewage treatment plant flow (m³/day): 2000.

Technical onsite conditions and measures to reduce or limit discharges to air, water and soil

Air
Treat air emission to provide a typical removal efficiency of 90%.

Water
No wastewater treatment required.

Soil
Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

Conditions and measures related to external treatment of waste for disposal

Waste treatment
External treatment and disposal of waste should comply with applicable local and/or national regulations.

Conditions and measures related to external recovery of waste

Recovery method
External recovery and recycling of waste should comply with applicable local and/or national regulations.

2. Conditions of use affecting exposure (Workers - Health 1)

Risk management measures
Distribution of Substance

Avoid splashing.

Exposure scenario
Formulation & (re)packing of Substances and Mixtures

Identification

Product name: Lubricating oils (petroleum), C15-30, hydrotreated neutral oil-based
CAS number: 72623-86-0
Version number: 2017
Es reference: ES02

1. Title of exposure scenario
Main title: Formulation & (re)packing of Substances and Mixtures
Process scope: Formulation, packing and re-packing of the substance and its mixtures in batch or continuous operations, including storage, materials transfers, mixing, tableting, compression, pelletisation, extrusion, large and small scale packing, sampling, maintenance and associated laboratory activities.

Environment

Environmental release category: ERC2 Formulation of preparations.
SPERC: ESVOC SpERC 2.2.v1

Worker

Process category: PROC1 Use in closed process, no likelihood of exposure.
PROC2 Use in closed, continuous process with occasional controlled exposure
PROC3 Use in closed batch process (synthesis or formulation).
PROC4 Use in batch and other process (synthesis) where opportunity for exposure arises.
PROC5 Mixing or blending in batch processes for formulation of preparations and articles (multistage and/or significant contact).
PROC8a Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at non-dedicated facilities.
PROC8b Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at dedicated facilities.
PROC9 Transfer of substance or preparation into small containers (dedicated filling line, including weighing).
PROC14 Production of preparations or articles by tableting, compression, extrusion, pelletisation.
PROC15 Use as laboratory reagent.

2. Conditions of use affecting exposure (Industrial - Environment 1)

Product characteristics

Substance is complex UVCB. Predominantly hydrophobic.

Amounts used

Fraction of EU tonnage used in region: 0.1
Regional use tonnage: 3 600 tonnes/year
Fraction of Regional tonnage used locally: 1
Annual site tonnage: 3 600 tonnes
Maximum daily site tonnage: 12 tonnes

Frequency and duration of use
Formulation & (re)packing of Substances and Mixtures

Continuous release.
Emission days: 300 days/year

Other given operational conditions affecting environmental exposure

Emission factor - air Release fraction to air from process (after typical onsite RMMs consistent with EU Solvent Emissions Directive requirements): 0.005

Emission factor - water Release fraction to wastewater from process (initial release prior to RMM): 0.000005

Emission factor - soil Release fraction to soil from process (initial release prior to RMM): 0.0001

Environmental factors not influenced by risk management measures

Dilution Local freshwater dilution factor: 10
Local marine water dilution factor: 100

Risk management measures

Good practice Common practices vary across sites, thus conservative process release estimates used.
Risk from environmental exposure is driven by freshwater sediment.

STP details Estimated substance removal from wastewater via domestic sewage treatment: 94.5%
Removal efficiency (total): 94.5%
Maximum allowable site tonnage (Msafe), based on release following total wastewater treatment removal: 1 100 tonne/day
Assumed domestic sewage treatment plant flow (m³/day):
2000.

Technical onsite conditions and measures to reduce or limit discharges to air, water and soil

Air Treat air emission to provide a typical removal efficiency of 0%.

Water No wastewater treatment required. Prevent discharge of undissolved substance to or recover from onsite waste water.

Soil Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

Conditions and measures related to external treatment of waste for disposal

Waste treatment External treatment and disposal of waste should comply with applicable local and/or national regulations.

Conditions and measures related to external recovery of waste

Recovery method External recovery and recycling of waste should comply with applicable local and/or national regulations.

2. Conditions of use affecting exposure (Workers - Health 1)

Risk management measures

Risk management measures

Good practice

Common practices vary across sites, thus conservative process release estimates used.

Risk from environmental exposure is driven by terrestrial secondary poisoning.

STP details

Estimated substance removal from wastewater via domestic sewage treatment: 94.5%

Removal efficiency (total): 94,5%

Maximum allowable site tonnage (Msafe), based on release following total wastewater treatment removal: 170 tonne/day

Assumed domestic sewage treatment plant flow (m³/day): 2000.

Technical onsite conditions and measures to reduce or limit discharges to air, water and soil

Air

Treat air emission to provide a typical removal efficiency of 80%.

Water

No wastewater treatment required. Prevent discharge of undissolved substance to or recover from onsite waste water.

Soil

Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

Conditions and measures related to external treatment of waste for disposal

Waste treatment

External treatment and disposal of waste should comply with applicable local and/or national regulations.

Conditions and measures related to external recovery of waste

Recovery method

External recovery and recycling of waste should comply with applicable local and/or national regulations.

2. Conditions of use affecting exposure (Workers - Health 1)

Risk management measures

Avoid splashing.

Avoid contact with contaminated tools and objects.

Handle in accordance with good industrial hygiene and safety practice.

Assumes a good basic standard of occupational hygiene is implemented.

Supervision in place to check that the RMMs in place are being used correctly and OCs followed.

Additional advice

Do not ingest. If swallowed, then seek immediate medical assistance.

3. Exposure estimation (Environment 1)

Assessment method

Used Petrorisk model. (Hydrocarbon Block Method)

Risk-driving RCR - air compartment driven RCR(air) ≤ 0.003 Risk-driving RCR - water compartment driven RCR(water) ≤ 0.00088
Use as Release Agents or Binders - Industrial

4. Guidance to check compliance with the exposure scenario (Environment 1)

Guidance is based on assumed operating conditions which may not be applicable to all sites, thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).

3. Exposure estimation (Health 1)

Qualitative approach used to conclude safe use.
Exposure scenario
Rubber Production and Processing - Industrial

Identification

Product name
Lubricating oils (petroleum), C15-30, hydrotreated neutral oil-based

CAS number
72623-86-0

Version number
2017

Es reference
ES19

1. Title of exposure scenario

Main title
Rubber Production and Processing - Industrial

Process scope
Manufacture of tyres and general rubber articles, including processing of raw (uncured) rubber, handling and mixing of rubber additives, vulcanising, cooling and finishing.

Sector of use
SU10 Formulation [mixing] of preparations and/or re-packaging
SU11 Manufacture of rubber products

Environment

Environmental release category
ERC4 Industrial use of processing aids in processes and products, not becoming part of articles.
ERC6d Industrial use of process regulators for polymerisation processes in production of resins, rubbers, polymers.

SPERC
ESVOC SpERC 4.19.v1

Worker

Process category
PROC1 Use in closed process, no likelihood of exposure.
PROC2 Use in closed, continuous process with occasional controlled exposure
PROC3 Use in closed batch process (synthesis or formulation).
PROC4 Use in batch and other process (synthesis) where opportunity for exposure arises.
PROC5 Mixing or blending in batch processes for formulation of preparations and articles (multistage and/or significant contact).
PROC6 Calendering operations.
PROC7 Spraying in industrial settings and applications.
PROC8a Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at non-dedicated facilities.
PROC8b Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at dedicated facilities.
PROC9 Transfer of substance or preparation into small containers (dedicated filling line, including weighing).
PROC13 Treatment of articles by dipping and pouring.
PROC14 Production of preparations or articles by tabletting, compression, extrusion, pelletisation.
PROC15 Use as laboratory reagent.
PROC21 Low energy manipulation of substances bound in materials and/or articles

2. Conditions of use affecting exposure (industrial - Environment 1)

Product characteristics
Substance is complex UVCB. Predominantly hydrophobic.

Amounts used

38/108
Rubber Production and Processing - Industrial

Fraction of EU tonnage used in region: 0.1
Regional use tonnage: 10 tonnes/year
Fraction of Regional tonnage used locally: 1
Annual site tonnage: 10 tonnes
Maximum daily site tonnage: 0.5 tonnes

Frequency and duration of use
Continuous release.
Emission days: 20 days/year

Other given operational conditions affecting environmental exposure

Emission factor - air
Release fraction to air from process (initial release prior to RMM): 0.01

Emission factor - water
Release fraction to wastewater from process (initial release prior to RMM): 0.00001

Emission factor - soil
Release fraction to soil from process (initial release prior to RMM): 0.0001

Environmental factors not influenced by risk management measures

Dilution
Local freshwater dilution factor: 10
Local marine water dilution factor: 100

CAS number | 72623-86-0
Version number | 2017
Es reference | ES13a

1. Title of exposure scenario

Main title | Use as Functional Fluids - Industrial
Process scope | Use as functional fluids e.g. cable oils, transfer oils, coolants, insulators, refrigerants, hydraulic fluids in industrial equipment, including maintenance and related material transfers.

Environment

Environmental release category | ERC7 Industrial use of substances in closed systems.
SPERC | ESVOC SpERC 7.13a.v1
Worker

Process category | PROC1 Use in closed process, no likelihood of exposure.
PROC2 Use in closed, continuous process with occasional controlled exposure
PROC3 Use in closed batch process (synthesis or formulation).
PROC4 Use in batch and other process (synthesis) where opportunity for exposure arises.
PROC8a Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at non-dedicated facilities.
PROC8b Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at dedicated facilities.
PROC9 Transfer of substance or preparation into small containers (dedicated filling line, including weighing).

2. Conditions of use affecting exposure (Industrial - Environment 1)

Product characteristics

Substance is complex UVCB. Predominantly hydrophobic.

Amounts used

Fraction of EU tonnage used in region: 0.1
Regional use tonnage: 50 tonnes/year
Fraction of Regional tonnage used locally: 0.2
Annual site tonnage: 10 tonnes
Maximum daily site tonnage: 500 kg

Frequency and duration of use

Continuous release.
Emission days: 20 days/year

Other given operational conditions affecting environmental exposure

Emission factor - air | Release fraction to air from process (initial release prior to RMM): 0.001
Use as Functional Fluids - Industrial

**Emission factor - water**
Release fraction to wastewater from process (initial release prior to RMM): 1.0E-06

**Emission factor - soil**
Release fraction to soil from process (initial release prior to RMM): 0.001

**Environmental factors not influenced by risk management measures**

<table>
<thead>
<tr>
<th>Dilution</th>
<th>Local freshwater dilution factor: 10</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Local marine water dilution factor: 100</td>
</tr>
</tbody>
</table>

**Risk management measures**

**Good practice**
Common practices vary across sites, thus conservative process release estimates used.

Risk from environmental exposure is driven by terrestrial secondary poisoning.

**STP details**
Estimated substance removal from wastewater via domestic sewage treatment: 94.5%
Removal efficiency (total): 94.5%
Maximum allowable site tonnage (Msafe), based on release following total wastewater treatment removal: 170 tonne/day
Assumed domestic sewage treatment plant flow (m³/day):
2000.

**Technical onsite conditions and measures to reduce or limit discharges to air, water and soil**

**Air**
Treat air emission to provide a typical removal efficiency of 0%.

**Water**
No wastewater treatment required. Prevent discharge of undissolved substance to or recover from onsite waste water.

**Soil**
Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

**Conditions and measures related to external treatment of waste for disposal**

**Waste treatment**
External treatment and disposal of waste should comply with applicable local and/or national regulations.

**Conditions and measures related to external recovery of waste**

**Recovery method**
External recovery and recycling of waste should comply with applicable local and/or national regulations.

2. **Conditions of use affecting exposure (Workers - Health 1)**

**Risk management measures**

Avoid splashing.
Avoid contact with contaminated tools and objects.
Handle in accordance with good industrial hygiene and safety practice.
Assumes a good basic standard of occupational hygiene is implemented.
Supervision in place to check that the RMMs in place are being used correctly and OCs followed.

**Additional advice**
Do not ingest. If swallowed, then seek immediate medical assistance.

3. **Exposure estimation (Environment 1)**

**Assessment method**
Used Petrorisk model. (Hydrocarbon Block Method)

Risk-driving RCR - air compartment driven RCR(air) ≤ 0.0029
Risk-driving RCR - water compartment driven RCR(water) ≤ 0.00094

4. **Guidance to check compliance with the exposure scenario (Environment 1)**
Use as Functional Fluids - Industrial

Guidance is based on assumed operating conditions which may not be applicable to all sites, thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).

3. Exposure estimation (Health 1)

Qualitative approach used to conclude safe use.
Exposure scenario
Uses in Coatings - Professional

Identification

Product name: Lubricating oils (petroleum), C15-30, hydrotreated neutral oil-based
CAS number: 72623-86-0
Version number: 2017
Es reference: ES03b

1. Title of exposure scenario

Main title: Uses in Coatings - Professional
Process scope: Covers the use in coatings (paints, inks, adhesives, etc.), including exposures during use (including materials receipt, storage, preparation and transfer from bulk and semi-bulk, application by spray, roller, brush, spreader by hand or similar methods and film formation) and equipment cleaning, maintenance and associated laboratory activities.

Environment

Environmental release category:
- ERC8a Wide dispersive indoor use of processing aids in open systems.
- ERC8d Wide dispersive outdoor use of processing aids in open systems.
SPERC: ESVOC SpERC 8.3b.v1
Worker

Process category:
- PROC1 Use in closed process, no likelihood of exposure.
- PROC2 Use in closed, continuous process with occasional controlled exposure
- PROC3 Use in closed batch process (synthesis or formulation).
- PROC4 Use in batch and other process (synthesis) where opportunity for exposure arises.
- PROC5 Mixing or blending in batch processes for formulation of preparations and articles (multistage and/or significant contact).
- PROC8a Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at non-dedicated facilities.
- PROC8b Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at dedicated facilities.
- PROC10 Roller application or brushing of adhesive and other coating.
- PROC11 Spraying outside industrial settings and/or applications.
- PROC13 Treatment of articles by dipping and pouring.
- PROC15 Use as laboratory reagent.
- PROC19 Hand-mixing with intimate contact and only PPE available.

2. Conditions of use affecting exposure (Industrial - Environment 1)

Product characteristics:
Substance is complex UVCB. Predominantly hydrophobic.

Amounts used:
- Fraction of EU tonnage used in region: 0.1
- Regional use tonnage: 10 tonnes/year
- Fraction of Regional tonnage used locally: 0.0005
- Annual site tonnage: 0.005 tonnes
- Maximum daily site tonnage: 14 g

Frequency and duration of use

59/108
Uses in Coatings - Professional

Continuous release.
Emission days: 365 days/year

Other given operational conditions affecting environmental exposure

- Emission factor - air: Release fraction to air from wide dispersive use (regional only): 0.98
- Emission factor - water: Release fraction to wastewater from wide dispersive use: 0.01
- Emission factor - soil: Release fraction to soil from wide dispersive use (regional only): 0.01

Environmental factors not influenced by risk management measures

- Dilution: Local freshwater dilution factor: 10
- Local marine water dilution factor: 100

Risk management measures

- Good practice: Common practices vary across sites, thus conservative process release estimates used.
  Risk from environmental exposure is driven by fresh water.

STP details

- Estimated substance removal from wastewater via domestic sewage treatment: 94.5%
  Removal efficiency (total): 94.5%
- Maximum allowable site tonnage (Msafe), based on release following total wastewater treatment removal: 13 kg/day
- Assumed domestic sewage treatment plant flow (m³/day): 2000.

Technical onsite conditions and measures to reduce or limit discharges to air, water and soil

- Air: Not determined.
- Water: No wastewater treatment required.
- Soil: Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

Conditions and measures related to external treatment of waste for disposal

- Waste treatment: External treatment and disposal of waste should comply with applicable local and/or national regulations.

Conditions and measures related to external recovery of waste

- Recovery method: External recovery and recycling of waste should comply with applicable local and/or national regulations.

Avoid splashing.
Avoid contact with contaminated tools and objects.
Handle in accordance with good industrial hygiene and safety practice.
Assumes a good basic standard of occupational hygiene is implemented.
Supervision in place to check that the RMMs in place are being used correctly and OCs followed.

Additional advice

Do not ingest. If swallowed, then seek immediate medical assistance.

3. Exposure estimation (Environment 1)

Assessment method

Used Petrorisk model. (Hydrocarbon Block Method)
Risk-driving RCR - air compartment driven RCR(air) ≤ 0.00018
Risk-driving RCR - water compartment driven RCR(water) ≤ 0.00088

4. Guidance to check compliance with the exposure scenario (Environment 1)
Use in Agrochemicals - Professional

Guidance is based on assumed operating conditions which may not be applicable to all sites, thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).

3. Exposure estimation (Health 1)

Qualitative approach used to conclude safe use.
Exposure scenario
Use in Road and Construction Applications - Professional

Identification

Product name: Lubricating oils (petroleum), C15-30, hydrotreated neutral oil-based

CAS number: 72623-86-0

Version number: 2017

Es reference: ES15

1. Title of exposure scenario

Main title: Use in Road and Construction Applications - Professional

Process scope: Application of surface coatings and binders in road and construction activities, including paving uses, manual mastic and in the application of roofing and water-proofing membranes.

Environment

Environmental release category: ERC8d Wide dispersive outdoor use of processing aids in open systems.

ERC8f Wide dispersive outdoor use resulting in inclusion into or onto a matrix.

SPERC: ESVOC SpERC 8.15.v1

Worker

Process category:

PROC8a Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at non-dedicated facilities.

PROC8b Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at dedicated facilities.

PROC9 Transfer of substance or preparation into small containers (dedicated filling line, including weighing).

PROC10 Roller application or brushing of adhesive and other coating.

PROC11 Spraying outside industrial settings and/or applications.

PROC13 Treatment of articles by dipping and pouring.

2. Conditions of use affecting exposure (Industrial - Environment 1)

Product characteristics

Substance is complex UVCB. Predominantly hydrophobic.

Amounts used

Fraction of EU tonnage used in region: 0.1
Regional use tonnage: 1.2 tonnes/year
Fraction of Regional tonnage used locally: 0.0005
Annual site tonnage: 0.0006 tonnes
Maximum daily site tonnage: 1.6 g

Frequency and duration of use

Continuous release.

Emission days: 365 days/year

Other given operational conditions affecting environmental exposure

Emission factor - air: Release fraction to air from wide dispersive use (regional only): 0.95

Emission factor - water: Release fraction to wastewater from wide dispersive use: 0.01
Use in Road and Construction Applications - Professional

Emission factor - soil
Release fraction to soil from wide dispersive use (regional only): 0.04

Environmental factors not influenced by risk management measures

Dilution
Local freshwater dilution factor: 10
Local marine water dilution factor: 100

Risk management measures

Good practice
Common practices vary across sites, thus conservative process release estimates used.
Risk from environmental exposure is driven by fresh water.

STP details
Estimated substance removal from wastewater via domestic sewage treatment: 94.5%
Removal efficiency (total): 94.5%
Maximum allowable site tonnage (Msafe), based on release following total wastewater treatment removal: 1.6 kg/day
Assumed domestic sewage treatment plant flow (m³/day): 2000.

Technical onsite conditions and measures to reduce or limit discharges to air, water and soil

Air
Not determined.

Water
No wastewater treatment required.

Soil
Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

Conditions and measures related to external treatment of waste for disposal

Waste treatment
External treatment and disposal of waste should comply with applicable local and/or national regulations.

Conditions and measures related to external recovery of waste

Recovery method
External recovery and recycling of waste should comply with applicable local and/or national regulations.

2. Conditions of use affecting exposure (Workers - Health 1)

Risk management measures
Avoid splashing.
Avoid contact with contaminated tools and objects.
Handle in accordance with good industrial hygiene and safety practice.
Assumes a good basic standard of occupational hygiene is implemented.

Used Petrorisk model. (Hydrocarbon Block Method)
Risk-driving RCR - air compartment driven RCR(air) ≤ 0.00018
Risk-driving RCR - water compartment driven RCR(water) ≤ 0.00087

4. Guidance to check compliance with the exposure scenario (Environment 1)
Explosives Manufacture and Use - Professional

Guidance is based on assumed operating conditions which may not be applicable to all sites, thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).

3. Exposure estimation (Health 1)

Qualitative approach used to conclude safe use.
Exposure scenario
Use as Functional Fluids - Professional

Identification

Product name: Lubricating oils (petroleum), C15-30, hydrotreated neutral oil-based

CAS number: 72623-86-0

Version number: 2017

Es reference: ES13b

1. Title of exposure scenario

Main title: Use as Functional Fluids - Professional

Process scope: Use as functional fluids e.g. cable oils, transfer oils, coolants, insulators, refrigerants, hydraulic fluids in professional equipment, including maintenance and related material transfers.

Environment

Environmental release category:

ERC9a Wide dispersive indoor use of substances in closed systems.

ERC9b Wide dispersive outdoor use of substances in closed systems.

SPERC: ESVOC SpERC 9.13b.v1

Worker

Process category:

PROC1 Use in closed process, no likelihood of exposure.

PROC2 Use in closed, continuous process with occasional controlled exposure

PROC3 Use in closed batch process (synthesis or formulation).

PROC8a Transfer of substance or preparation (charging/discharging) from/to vessels/large containers at non-dedicated facilities.

PROC9 Transfer of substance or preparation into small containers (dedicated filling line, including weighing).

PROC20 Heat and pressure transfer fluids in dispersive use but closed systems.

2. Conditions of use affecting exposure (Industrial - Environment 1)

Product characteristics

Substance is complex UVCB. Predominantly hydrophobic.

Amounts used

Fraction of EU tonnage used in region: 0.1

Regional use tonnage: 10 tonnes/year

Fraction of Regional tonnage used locally: 0.0005

Annual site tonnage: 0.0051 tonnes

Maximum daily site tonnage: 14 g

Frequency and duration of use

Continuous release.

Emission days: 365 days/year

Other given operational conditions affecting environmental exposure

Emission factor - air

Release fraction to air from wide dispersive use (regional only): 0.05

Emission factor - water

Release fraction to wastewater from wide dispersive use: 0.025
Use as Functional Fluids - Professional

**Emission factor - soil**
Release fraction to soil from wide dispersive use (regional only): 0.025

**Environmental factors not influenced by risk management measures**

**Dilution**
- Local freshwater dilution factor: 10
- Local marine water dilution factor: 100

**Risk management measures**

**Good practice**
Common practices vary across sites, thus conservative process release estimates used.
Risk from environmental exposure is driven by fresh water.

**STP details**
Estimated substance removal from wastewater via domestic sewage treatment: 94.5%
Removal efficiency (total): 94.5%
Maximum allowable site tonnage (Msafe), based on release following total wastewater treatment removal: 13 kg/day
Assumed domestic sewage treatment plant flow (m³/day): 2000.

**Technical onsite conditions and measures to reduce or limit discharges to air, water and soil**

**Air**
Not determined.

**Water**
No wastewater treatment required.

**Soil**
Do not apply industrial sludge to natural soils. Sludge should be incinerated, contained or reclaimed.

**Conditions and measures related to external treatment of waste for disposal**

**Waste treatment**
External treatment and disposal of waste should comply with applicable local and/or national regulations.

**Conditions and measures related to external recovery of waste**

**Recovery method**
External recovery and recycling of waste should comply with applicable local and/or national regulations.

2. Conditions of use affecting exposure (Workers - Health 1)

**Risk management measures**
Avoid splashing.
Avoid contact with contaminated tools and objects.
Handle in accordance with good industrial hygiene and safety practice.
Assumes a good basic standard of occupational hygiene is implemented.
Supervision in place to check that the RMMs in place are being used correctly and OCs followed.

**Additional advice**
Do not ingest. If swallowed, then seek immediate medical assistance.

3. Exposure estimation (Environment 1)

**Assessment method**
Used Petrorisk model. (Hydrocarbon Block Method)
Risk-driving RCR - air compartment driven RCR(air) ≤ 0.00018
Risk-driving RCR - water compartment driven 0.00092

4. Guidance to check compliance with the exposure scenario (Environment 1)
Use as Functional Fluids - Professional

Guidance is based on assumed operating conditions which may not be applicable to all sites, thus, scaling may be necessary to define appropriate site-specific risk management measures. Required removal efficiency for wastewater can be achieved using onsite/offsite technologies, either alone or in combination. Required removal efficiency for air can be achieved using onsite technologies, either alone or in combination. Further details on scaling and control technologies are provided in SpERC factsheet (http://cefic.org/en/reach-for-industries-libraries.html).

1. Title of exposure scenario

Main title
Uses in Coatings - Consumer

Process scope
Covers the use in coatings (paints, inks, adhesives, etc.), including exposures during use (including product transfer and preparation, application by brush, spray by hand or similar methods) and equipment cleaning.

Product category
PC1 Adhesives, sealants.
PC4 Anti-freeze and de-icing products.
PC8a Excipient only
PC9a Coatings and paints, thinners, paint removers.
PC9b Fillers, putties, plasters, modelling clay.
PC9c Finger paints.
PC15 Non-metal-surface treatment products.
PC18 Ink and toners.
PC23 Leather tanning, dye, finishing, impregnation and care products.
PC24 Lubricants, greases and release products.
PC31 Polishes and wax blends.
PC34 Textile dyes, finishing and impregnating products, including bleaches and other processing aids.

Environment

Environmental release category
ERC8a Wide dispersive indoor use of processing aids in open systems.
ERC8d Wide dispersive outdoor use of processing aids in open systems.

SPERC
ESVOC SpERC 8.3c.v1
